Press Release

FOR IMMEDIATE RELEASE June 14th 2017

Montreal Heart Institute Hospital Affirms Meditel® & PatientLogix™ Media Studio Cloud Based Value Proposition Awards Hôpital® Patient TV/Media System Contract

The Montreal Heart Institute (MHI) is the leading specialized cardiology hospital in Canada and one of the largest cardiology institutes in the world. Its internationally recognized Research Centre was the first one entirely dedicated to cardiovascular disease and to this day remains one of the world's best cardiology research facilities. Affiliated with Université de Montréal, the MHI is an ultra-specialized hospital center dedicated to care, research, teaching, prevention, rehabilitation and the assessment of new technologies in cardiology.

The MHI has chosen Hôpital to supply and install 115 in-patient room Touch Screen Bedside TV Media Terminals and supply services from its IP Cloud based Patient Infotainment TV and Education Media Delivery Systems throughout its 153 bed hospital facility in Montreal.

Hôpital's cloud based infotainment and educational media system will be going into service at the MHI in Q4 of 2017. Hôpital Inc. has been for over 40 years Canada's foremost healthcare supplier of in-hospital infotainment, education and communication systems and services 45 hospitals in Canada.

The Meditel Studio Patient Bedside TV Media Terminals provides hospitals a cost effective "network window" through which hospital personnel can easily access and manage Electronic Medical Records, Health Education, Video & Audio Communications, Interactive Hospitality applications and where patients can easily self-rent to access a wide variety of Infotainment, Communications, Health Education, and host of other Interactive Hospitality applications and services on a 24/7 basis.

The PatientLogix Media Studio Cloud based Delivery System provides a cost-effective means of delivering important Health Educational media to patients throughout the full patient care continuum. Its compliment of On-Demand and Prescriptive media applications and platforms are modular, interoperable and can deliver services through existing hospital TV system infrastructures, on patient Computers, Tablets and Smart Phones and are completely scalable.
